GigaLayer Acquires Registeram.com, Strengthens Domain and Hosting Services Market Dominance

LAGOS: February 18, 2026 - GigaLayer, a prominent player in Africa's cloud infrastructure and domain services sector, has announced the acquisition of Registeram, a Nigerian domain registration and hosting firm.

This move marks a significant consolidation in the local tech ecosystem, as GigaLayer continues its aggressive expansion strategy to dominate the digital infrastructure market in Nigeria and across the continent.

Consolidating the Digital Backbone

The acquisition of Registeram, which has been operational since 2008, is the latest in a series of strategic buyouts by GigaLayer.

The company has previously integrated brands such as Trudigits, Hub8, MainOne's SMEinaBox, and LagosHost, effectively positioning itself as a primary consolidator in a fragmented hosting industry.

According to Ahmad Mukoshy, Founder and CEO of GigaLayer, the deal is less about increasing headcount and more about infrastructure resilience.

"This acquisition reinforces our commitment to building resilient, locally operated cloud and domain infrastructure for African businesses. We are not just acquiring customers; we are strengthening Africa's digital backbone," Mukoshy stated.

What this means for Registeram customers

GigaLayer has assured Registeram's existing clientele of a seamless transition with no immediate service disruptions.

Key highlights of the integration include:

- **Infrastructure Upgrade:** Services will be migrated to GigaLayer's enterprise-grade platform to improve performance and redundancy.
- **Security & Support:** Users will gain access to enhanced security standards and GigaLayer's robust support system.
- **Product Expansion:** Existing customers will now have access to broader cloud compute and high-availability hosting solutions.

Focus on Local Cloud Sovereignty

As Nigerian businesses face increasing pressure to comply with local data residency regulations, GigaLayer is doubling down on local cloud sovereignty.

The company currently operates infrastructure across two data centers in Lagos, focusing on bare-metal and cloud compute capabilities designed for enterprise workloads.

By reducing reliance on offshore providers, GigaLayer aims to provide high-performance solutions that are both compliance-ready and tailored for the Nigerian economic climate.

“We believe Africa’s digital future must be built on African infrastructure,” Mukoshy added.

Strategic Outlook

The founders of Registeram are expected to exit to pursue other ventures, while GigaLayer takes full operational control of the assets and client portfolio.

This acquisition signals a maturing market where local players are scaling up to compete with global giants by offering localized support, Naira-based pricing stability, and low-latency infrastructure.

About GigaLayer:

Founded in Nigeria, GigaLayer provides cloud infrastructure, domain registration, and hosting services. The company focuses on performance, compliance, and reliability, serving a global client base with a specific emphasis on African enterprise growth.

GigaLayer Acquires Registeram, Expands Operations in Nigerian Domain and Hosting Market

LAGOS: February 18, 2026: GigaLayer, one of Africa’s leading cloud infrastructure and domain services providers, has announced the acquisition of Registeram, a Nigerian domain registration and hosting company serving businesses across the country. This strategic move marks a significant milestone in GigaLayer’s expansion plan to consolidate reliable digital infrastructure services across Nigeria and the broader African market.

Registeram, which has been in operation since 2008, will see its customers enjoy uninterrupted access to existing products and services. Over the coming months, these services will be gradually integrated into GigaLayer’s infrastructure platform to enhance performance, security, redundancy, and support experience.

"This acquisition reinforces our commitment to building resilient, locally operated cloud and domain infrastructure for African businesses," said Ahmad Mukoshy, Founder and CEO of GigaLayer. *"We are not just acquiring customers; we are strengthening Africa's digital backbone."* The acquisition means Registeram’s services will be integrated into GigaLayer’s enterprise-grade infrastructure, enhancing support systems and security standards. Customers will also gain access to expanded cloud compute and hosting solutions.

GigaLayer currently operates infrastructure across two data center locations in Lagos, with ongoing expansion of its local bare-metal and cloud compute capabilities tailored for compliance, enterprise workloads, and high-availability applications.

This acquisition is part of GigaLayer's strategic expansion, following previous integrations of Trudigits, Hub8, MainOne's SMEinaBox, and LagosHost. The company's strategy focuses on local cloud sovereignty, compliance-ready infrastructure, enterprise-grade hosting solutions, reliable domain and DNS services, and long-term ecosystem stability.

Registeram's founders will transition into other ventures, while GigaLayer assumes full operational control of its assets and client portfolio. GigaLayer's expansion reflects a broader commitment to ensuring Nigerian businesses have access to secure, high-performance infrastructure without reliance on offshore dependency.

"We believe Africa's digital future must be built on African infrastructure," Mukoshy added.

Founded in Nigeria, GigaLayer is a cloud infrastructure, domain registration, and hosting provider serving businesses across Africa and globally, focusing on performance, compliance, security, and reliability.
